Manuscript title:

Habitual tea consumption is associated with a lower prevalence of kidney stone disease in postmenopausal women

Comments

This manuscript is well structured overall but it needs many modifications that we will point out in the comments sections below:

Title

Authors consider revising the title to be concise and clear and it indicate the country or study region.

Abstract

I suggest to revise the background introduction subsection to indicate the gap in relation with this work and to state clearly the objective of this study.

In the methodology, authors should indicate the number of patients for each group (drinking and no drinking tea)

 -The abstract provides a good overview, but it lacks specific details on the methods and results. It should include studied population, key numerical results and the main implications of the study.

Key words are missing

Introduction

- A paragraph about nutrition and kidney stone is required, with adequate recent references.

- The hypothesis is neutral. Authors should present a clear hypothesis about microwaves and brain functions (learning and memory) in patients.

- Please rewrite the last paragraph by indicating the question research and state clearly the objectives of this study.

Methodology

- Authors should indicate the method of sampling.

- Inclusion and exclusion criteria are important for reproducing the study

- according to tables 1 and 2 , for the parameters smoker alcohol and physical activity, the two groups tea drinking and tea no drinking are different ($p<0.001$). so we can relate the lower prevalence of kidney stone to tea drinking. I suggest choosing two groups with similar characteristics even small number of patients.

Discussion

Revise the Discussion section so that your first paragraph summarizes the objective of your study.

Please add a limitations and future directions paragraph (method accuracy, generalization …)

Conclusion

The conclusion is poor. Authors should revise the conclusion by focusing in the main raised points and the future specific directions.

 All used acronyms must be defined in their first mention (ex : DM)
